

# **SRI KRISHNA ARTS AND SCIENCE COLLEGE**

An Autonomous College Affiliated to Bharathiar University

Re-Accredited by NAAC with 'A' Grade

Coimbatore -641 008, Tamil Nadu, India.

## **CBCS & OBE**

Scheme of Instruction and Syllabus for

### **B.Sc. Electronics and Communication Systems**

Effective from the Academic Year 2019-20 and onwards

## **DEPARTMENT OF ELECTRONICS AND COMMUNICATION SYSTEMS**

## SRI KRISHNA ARTS AND SCIENCE COLLEGE COIMBATORE - 641008

### DEPARTMENT OF ELECTRONICS AND COMMUNICATION SYSTEMS

#### I. Vision

*The vision of the college FITNESS FOR PURPOSE is achieved by*

- Preparing students for placements both during and outside the course work
- Strengthening the research activities in the departments
- Encouraging the consultancy and extension services involving students and faculty
- Creating a brand equity and brand image by carrying out activities with the motto 'KNOWLEDGE, LOVE AND SERVICE'

#### II. Mission

The mission of the college is to prepare both boys and girls for the pressing demands of tomorrow keeping in mind the need to shape and mould a generation of young men and women with knowledge, character, true and genuinely cultivated spirit of service and far-reaching imagination.

#### III. Program Educational Objectives (PEOs)

The graduates of the Sri Krishna Arts and Science College will

- PEO 1: Take an active role and participate in their continuous professional development including graduate studies when appropriate to their career goals
- PEO 2: Maintain ethical and professional standards in their careers
- PEO 3: Practice the domain knowledge in the application oriented discipline

#### IV. Program Outcomes (POs)

The graduates of the Sri Krishna Arts and Science should have

- PO 1: An ability to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, and sustainability
- PO 2: An ability to function on multidisciplinary teams
- PO 3: An understanding of professional and ethical responsibility
- PO 4: An ability to communicate effectively
- PO 5: A recognition of the need for, and an ability to engage in life-long learning
- PO 6: A knowledge of contemporary issues
- PO7: An ability to apply the acquired knowledge in Electronics and Communication Systems

## V. Graduate Attributes/Skills

The graduates of Sri Krishna Arts and Science College provided opportunity to develop

GA 1: Communication Skills

GA 2: Conceptual Skills

GA 3: Analytical Skills

GA 4: Competitive Skills

GA 5: Managerial Skills

GA 6: Technical Skills

## VI. Mapping of PEOs, POs and GAs

### PEO-PO Mapping

| PEOs  | Program Objectives (POs)  |      |      |      |      |      |      |
|-------|---|------|------|------|------|------|------|
|       | 3 - High Correlation; 2 - Medium Correlation; 1-Low Correlation |      |      |      |      |      |      |
|       | PO 1  | PO 2 | PO 3 | PO 4 | PO 5 | PO 6 | PO 7 |
| PEO 1 | 3   | 2    | 1    | 3    | 3    | 3    | 2    |
| PEO 2 | 3   | 2    | 3    | 3    | 2    | 3    | 3    |
| PEO 3 | 2   | 3    | 2    | 2    | 2    | 3    | 3    |

### PO-GA Mapping

| POs  | Graduate Attributes (GAs)  |     |     |     |     |     |
|------|--|-----|-----|-----|-----|-----|
|      | 3 - High Correlation; 2 - Medium Correlation; 1- Low Correlation |     |     |     |     |     |
|      | GA1  | GA2 | GA3 | GA4 | GA5 | GA6 |
| PO 1 | 3  | 2   | 3   | 3   | 3   | 2   |
| PO 2 | 3  | 2   | 3   | 3   | 3   | 2   |
| PO 3 | 1  | 3   | 3   | 2   | 1   | 1   |
| PO 4 | 3  | 2   | 3   | 3   | 2   | 2   |
| PO 5 | 2  | 2   | 2   | 1   | 1   | 2   |
| PO 6 | 2  | 3   | 2   | 3   | 2   | 3   |
| PO 7 | 2  | 3   | 3   | 3   | 1   | 3   |

**SRI KRISHNA ARTS AND SCIENCE COLLEGE**

## Descriptions and Regulations

### 1. Discipline Specific Courses (DSC)

These courses are to be studied compulsorily by the students as a core requirement. The students are required to take DSCs across six semesters. The courses designed under this category aim to cover the basics that a student is expected to imbibe in the particular discipline. The students should study minimum of 12 courses in this category.

| DSC Theory   | DSC Practical                                |
|--|--|
| 1. Basic Electronics and Network Analysis          | 1. Basic Electronics Lab                     |
| 2. Electronic Devices and Circuits                 | 2. Network Analysis Lab                      |
| 3. Communication Electronics                       | 3. Electronic Devices Lab                    |
| 4. Integrated Circuits and Instrumentation         | 4. Electronic Circuits Lab                   |
| 5. Digital Electronics and VHDL                    | 5. Linear Integrated Circuits Lab            |
| 6. Microwave and Fiber Optic Communication Systems | 6. Digital Electronics and VHDL Lab          |
| 7. 8051 Microcontroller and Applications           | 7. Communication Electronics Lab             |
| 8. Embedded Systems with PIC                       | 8. 8051 Microcontroller and Applications Lab |
| 9. Robotics and Arduino Programming                | 9. Embedded Systems with PIC Lab             |
| 10. Modern Communication Systems                   | 10. Robotics and Arduino Programming Lab     |
| 11. Computer Networks                              | 11. Industrial and Power Electronics Lab     |
| 12. Industrial and Power Electronics               | 12. Modern Communication Systems Lab         |

### 2. Discipline Specific Elective Courses (DSE)

Discipline Specific Elective courses offered under the main discipline of study which may be specialized or advanced or supportive to the discipline of study. A student will choose four DSE courses related to his/her subject in the IV, V and VI semesters.

#### 1. DSE-I (Any one)

- Programmable Logic Controller
- Biomedical Instrumentation

#### 2-3. IET (or) any two DSE courses

Industrial Exposure Training (IET): Students can opt for Industrial Exposure Training during fifth semester for a period of 8-10 weeks; in such case two courses, DSE-II & DSE-III will be exempted. Marks for the Industrial Exposure Training will be given based on the report and viva-voce examination conducted by the Department.

#### DSE-II & DSE-III

- Internet of Things
- Artificial Intelligence

## 4. Project (Dissertation)

During the sixth semester students should undertake a project work and submit the report. A guide will be allotted to each group of students (not exceeding four members in a group) by the Department. The project should be demonstrated at the time of viva-voce examination.

**Internal Evaluation & Marks**

CIA - 25 Marks

(First Review - 10 Marks, Second Review - 10 Marks & Work Dairy – 5 Marks)

**External Evaluation & Marks**

ES - 75 Marks (Dissertation - 50 Marks & Viva-voce - 25 Marks)

**3. Generic Elective Courses (GEC)**

Generic Elective Courses are the inter-disciplinary courses with an intention to seek exposure beyond discipline of choice. The students are required to study four of them during the first and second year.

1. Mathematics - I
2. Mathematics - II
3. a) C Programming and Data Structures  
b) C Programming and Data Structures Lab
4. a) Python Programming  
b) Python Programming Lab
5. a) Internet and Java Programming  
b) Internet and Java Programming Lab
6. a) DBMS  
b) DBMS Lab

**4. Ability Enhancement Compulsory Courses (AECC)**

An Undergraduate Programme degree may be awarded if a student completes TWO Ability Enhancement Compulsory Courses during semester I and II. These courses aim to enhance the knowledge on Environmental Education and multidimensional understanding of the various topics for the sustainable development of India.

1. Environmental Science
2. Elective Course (Any One)
  - General Awareness
  - Human Rights
  - Women's Rights
  - Yoga for Human Excellence
  - Indian Culture and Heritage
  - Introduction to Cyber Security
  - Consumer Protection
  - Constitution of India
  - Basic Tamil
  - Advanced Tamil

## 5. Skill Enhancement Courses (SEC)

Skill Enhancement Courses are value-based and/or skill-based and should contain theory/lab/hands-on training/fieldwork, etc to enhance students' employability. A student shall have to study FOUR courses during Semester III to IV (one course in each semester).

### 1. Extra Departmental Course (EDC)

Extra Departmental Course is an inter-disciplinary elective course designed to facilitate horizontal movement. Students shall choose any one compulsory EDC offered by other Departments in the third semester.

#### *The EDC offered by ECS Department*

| Course Code | Course Title                                  | T/P | Ins. Hrs/ Week | Map Code | CIA Marks | ES Marks | Total Marks | Credits |
|-------------|---|-----|----------------|----------|-----------|----------|-------------|---------|
| 19SEC09     | PC Hardware, Installation and Troubleshooting | T   | 3              | D        | 100       | -        | 100         | 3       |

2. English for Competitive Examination
3. Mathematics for Competitive Examination
4. Value Added Courses: (Department shall offer value added courses based on their expertise, specialization, requirements, scope and need.)
  - a) Mobile Application Development /
  - b) PC Hardware and Troubleshooting

## 6. Non Credit Courses (NCC)

Non Credit Courses are intended for students who want to gain general knowledge, learn a new skill, upgrade existing skills, enrich their understanding of a wide range of topics, or develop personal interests. A student shall have to take THREE courses during Semester V and VI.

### 1. On-line Test

Online Test will be conducted at the end of the fifth semester. Hundred multiple choice questions will be asked from core courses.

### 2. Industrial Internship Training / Mini Project/ Spoken Tutorial/ Drive Through Course

Students individually or with maximum of four members per batch should take up either Industrial internship or Mini Project for a period of fifteen days during the IV semester summer vacation. The report will be evaluated and viva-voce examination will be conducted during fifth semester by the Department. Otherwise, they have to complete one Spoken Tutorial or a Drive Through Course suggested by the Department.

### 3. Extension Activities: National Service Scheme / National Cadet Corps / Youth Red Cross / Red Ribbon Club / Rotaract Club / Sports / Association Activities

## 7. Non CGPA Credit Courses (NCCC)

These courses are intended to bring out and promote the self-learning initiative of the students – where their own motivation is what drives them to complete the course and not external compulsions. This fosters the habit of keeping oneself updated always by means of self-study. It gives the students the opportunities to explore new areas of interest and earn additional credits. Students can take any number of courses under this cafeteria system, three credits will be given on completion of each course. The credits will not be taken for CGPA calculation.

### 1. Compulsory Non CGPA Credit Course

Any one MOOC shall be completed anytime during the programme, offered in SWAYAM/NPTEL online portal under MHRD, Govt. of India. The course must be of minimum 4 weeks duration.

### 2. Additional Non CGPA Credit Courses

a) MOOC: Apart from completing one compulsory MOOC, students can take any number of online courses offered in SWAYAM/NPTEL online portal and earn additional credits. When a student take

more number of online courses, the first course will be taken for compulsory MOOC and for the subsequent MOOCs additional credits will be given in the same semester upon clearing the exam and submitting certificate at least 15 days before the release of semester examination results.

b) Additional Credit Courses (ACC): The College will release list of additional credit courses of self-study nature during every semester. Upon clearing the exam three additional credits will be given for each ACC.

\*\*\*\*\*

**Bloom's Taxonomy Levels and Verbs**

| I.<br>Remembering   | II.<br>Understanding  | III.<br>Applying   | IV.<br>Analyzing  | V.<br>Evaluating  | VI.<br>Creating   |
|---|---|--|---|---|---|
| Exhibit memory of previously learned material by recalling facts, terms, basic concepts, and answers.   | Demonstrate understanding of facts and ideas by organizing, comparing, translating, interpreting, giving descriptions, and stating main ideas.  | Solve problems to new situations by applying acquired knowledge, facts, techniques and rules in a different way.   | Examine and break information into parts by identifying motives or causes. Make inferences and find evidence to support generalizations.  | Present and defend opinions by making judgments about information, validity of ideas, or quality of work based on a set of criteria.  | Compile information on together in a different way by combining elements in a new pattern or proposing alternative solutions.   |

|------------|-------------|--|
| B.Sc (ECS) | 19ECU01     | Basic Electronics and Network Analysis |

**Preamble:** This course provides students with a basic understanding of an electricity and electronics. It enables students to solve basic problems related to AC and DC circuits with various theorems and methods.

**Expected level of output** : Conceptual Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in elements of electronics

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|--|------------------------|------------|-----------------------------|
| CO1            | Identify and define basic terms and concepts which are needed for electronic science.            | Remembering            | Conceptual | Writing skills              |
| CO2            | Recognize basic electronic components used for different electronic functions.                   | Understanding          | Conceptual | Technical Presentation      |
| CO3            | Understand basic concepts of DC and AC circuit behavior.   | Understanding          | Conceptual | Writing Skills              |
| CO4            | Demonstrate the problem solving skills and proficiency in circuit analysis.                      | Applying               | Technical  | Poster Presentation/ Charts |
| CO5            | Express the basic structure, properties and working principles of P-N junction circuit elements. | Analyzing              | Analytical | Group Assignment            |

**Modular Assessment Code** : C (Theory-Concepts)

**Course Inputs:**

| Programme  | Course Code | Title                 |
|------------|-------------|-----------------------|
| B.Sc (ECS) | 19ECU02     | Basic Electronics Lab |

**Preamble:** This course focuses to design, construct and take measurement of basic electronic circuits, and compare the experimental results with theoretical concepts in the laboratory.

**Expected level of output** : Practical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in elements of electronics

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation    |
|----------------|--|------------------------|------------|------------------------|
| CO1            | Explain the concepts and responses of basic electronic circuits. | Understanding          | Conceptual | Simulation Exercises   |
| CO2            | Understand the VI characteristics of semiconductor devices.      | Understanding          | Technical  | Technical Presentation |
| CO3            | Develop the ability to design and analyze electronic circuits.   | Applying               | Technical  | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

**Course Inputs:**

**Any 9 Experiments**

| Exp. | Name of the Experiment                                |
|------|---|
| 1    | Determining value of resistors and ceramic capacitors |
| 2    | Verification of Ohm's Law                             |
| 3    | Temperature Coefficient of Resistance                 |
| 4    | Resistors in Series and Parallel                      |
| 5    | Capacitors in Series and Parallel                     |
| 6    | LDR characteristics                                   |
| 7    | Measurement of AC signal parameters using CRO         |
| 8    | Measurement of reactance in RC circuit                |
| 9    | Series resonance circuit                              |
| 10   | Parallel resonance circuit                            |
| 11   | V-I Characteristics of PN junction diode              |
| 12   | V-I Characteristics of Zener diode                    |
|      | Repeat/Revision                                       |
|      | <b>6</b>  |
|      | <b>Total Hours</b>                                    |
|      | <b>33</b>   |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical Classes to be arranged in Electronic Circuits Lab

**Essential Equipments:** Power Supply, Function Generator, CRO and Multi-meter.

| Programme  | Course Code | Title                |
|------------|-------------|----------------------|
| B.Sc (ECS) | 19ECU03     | Network Analysis Lab |

**Preamble:** This laboratory course is designed to provide the students with the knowledge to use networks theorems for circuit analysis. In addition, the students will learn how to compare theoretical predictions with experimental results.

**Expected level of output** : Practical Level  
**Department offered** : Electronics and Communication Systems  
**Prerequisites** : Knowledge in elements of electronics

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation    |
|----------------|---|------------------------|------------|------------------------|
| CO1            | Test circuits, analyze data and compare measured performance to theory. | Understanding          | Conceptual | Simulation Exercises   |
| CO2            | Demonstrate network theorems using electronic components.               | Applying               | Technical  | Technical Presentation |
| CO3            | Troubleshoot and repair simple electric circuits.                       | Evaluating             | Technical  | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

**Course Inputs:**

**Any 9 Experiments**

| Exp. | Name of the Experiment                         |
|------|--|
| 1    | Verification of Kirchhoff's Voltage Law (KVL)  |
| 2    | Verification of Kirchhoff's Current Law (KCL)  |
| 3    | Verification of Voltage Division Rule          |
| 4    | Verification of Current Division Rule          |
| 5    | Mesh Current Analysis in DC circuit            |
| 6    | Node Voltage Analysis in DC circuit            |
| 7    | Verification of Super position theorem         |
| 8    | Verification of Maximum power transfer theorem |
| 9    | Verification of Thevenin's theorem             |
| 10   | Verification of Norton's theorem               |
| 11   | Verification of Millman's theorem              |
| 12   | Verification of Reciprocity theorem            |
|      | Repeat/Revision                                |
|      | 6  |
|      | <b>Total Hours</b>                             |
|      | <b>33</b>                                      |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical Classes to be arranged in Electronic Circuits Lab

**Essential Equipments:** Power Supply, Ammeter, Voltmeter and Multi-meter

| Programme  | Course Code | Title                           |
|------------|-------------|---------------------------------|
| B.Sc (ECS) | 19ECU04     | Electronic Devices and Circuits |

**Preamble:** This course builds the knowledge-base on the physics of semiconductors as related to the characteristics and design of solid-state electronic devices. It provides fundamental knowledge on basic electronic circuits.

**Expected level of output** : Conceptual Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in basic electronic components

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|---|------------------------|------------|-----------------------------|
| CO1            | Acquire a basic knowledge in solid state electronics including BJT, FET, MOSFET and Thyristors. | Understanding          | Conceptual | Writing skills              |
| CO2            | Understand the functionality of power supply and regulator circuits.                            | Understanding          | Conceptual | Group Assignment            |
| CO3            | Design and verify the amplifier and oscillator circuits.  | Applying               | Technical  | Technical Presentation      |
| CO4            | Develop the ability to analyze electronic circuits using discrete components.                   | Analyzing              | Analytical | Poster Presentation/ Charts |
| CO5            | Troubleshoot and redesign the electronic circuits.  | Analyzing              | Analytical | Technical Presentation      |

**Modular Assessment Code** : C (Theory-Concepts)

**Course Inputs:**

| Unit | Description   | Text Book | Chapter | Instructional Hours | COs |
|------|---|-----------|---------|---------------------|-----|
| I    | <b>Bipolar Junction Transistor (BJT)</b>  |           |         |                     |     |
|      | Construction and Operation of BJT   | A         | 14      | 2                   |     |
|      | BJT circuit configurations; Comparison of CB, CE and CC configurations                      | A         | 14      | 1                   |     |
|      | Characteristics of a transistor in CE configuration   | A         | 15      | 1                   |     |
|      | <b>Transistor Biasing</b>   |           |         |                     |     |
|      | Operating point; DC load line; Stability factor   | B         | 29      | 1                   | CO1 |
|      | Base resistor method; Biasing with feedback resistor; Voltage divider bias method           | B         | 29      | 3                   |     |
| II   | <b>Small Signal Amplifiers</b>  |           |         |                     |     |
|      | Classification of amplifiers; Transistor as an amplifier; CE transistor amplifier           | A         | 16      | 3                   |     |
|      | Two-stage RC coupled amplifier; Frequency response of RC coupled amplifier; Applications    | A         | 18      | 2                   |     |
|      | <b>Field Effect Transistor (FET)</b>  |           |         |                     |     |
|      | Types of FET; Construction of JFET; Operation of JFET                                       | A         | 16      | 2                   |     |
| II   | Characteristics of JFET   | A         | 16      | 1                   | CO1 |
|      | MOSFETs: Types of MOSFET; Construction and working of D-MOSFET; Characteristics of D-MOSFET | A         | 16      | 4                   |     |

|                    |   |   |    |           |                   |
|--------------------|---|---|----|-----------|-------------------|
|                    | Construction and working of E-MOSFET; Characteristics of E-MOSFET   | A | 16 | 3         |                   |
| III                | <b>Thyristors</b>   |   |    |           |                   |
|                    | Types of Thyristors; Silicon Controlled Rectifier (SCR); SCR construction; SCR operation                              | A | 17 | 3         |                   |
|                    | VI characteristics of SCR   | A | 17 | 1         |                   |
|                    | TRIAC: TRIAC construction; TRIAC operation  | A | 17 | 2         |                   |
|                    | VI characteristics of TRIAC; Applications   | A | 17 | 2         | CO1<br>CO4        |
|                    | Unijunction Transistor (UJT): Basic construction; UJT operation; VI characteristics of UJT; UJT Relaxation Oscillator | A | 17 | 3         |                   |
|                    | DIAC: DIAC construction; VI characteristics of DIAC   | A | 17 | 2         |                   |
| IV                 | <b>Power Supply</b>   |   |    |           |                   |
|                    | Half-wave rectifier   | B | 28 | 1         |                   |
|                    | Full-wave rectifier: Centre-tap full-wave rectifier, Full-wave bridge rectifier                                       | B | 28 | 2         |                   |
|                    | DC output voltage; Ripple factor; Efficiency  | B | 28 | 2         | CO2<br>CO4        |
|                    | Filter circuits: Types of filter circuits   | B | 28 | 2         |                   |
|                    | Regulated Power Supply; Zener diode regulator   | - | -  | 2         |                   |
|                    | IC voltage regulators: Fixed voltage regulators   | - | -  | 3         |                   |
| V                  | Adjustable voltage regulators   | - | -  | 1         |                   |
|                    | <b>Power Amplifiers</b>   |   |    |           |                   |
|                    | Classification of power amplifiers; Class-A amplifier; Class-B amplifier  | A | 22 | 3         |                   |
|                    | Class-B push-pull amplifier; Class C amplifier  | A | 22 | 2         |                   |
|                    | <b>Feedback Amplifiers</b>  |   |    |           |                   |
|                    | Principle of feedback amplifiers  | A | 29 | 1         | CO3<br>CO4<br>CO5 |
|                    | <b>Oscillators</b>  |   |    |           |                   |
|                    | Classification of oscillators; Barkhausen criterion   | A | 31 | 1         |                   |
|                    | Hartley and Colpitts oscillators  | A | 31 | 3         |                   |
|                    | RC-Phase shift, Wein Bridge and Crystal oscillators   | A | 31 | 2         |                   |
|                    | Revision  |   |    | 5         |                   |
| <b>Total Hours</b> |   |   |    | <b>66</b> |                   |

| Programme  | Course Code | Title                  |
|------------|-------------|------------------------|
| B.Sc (ECS) | 19ECU05     | Electronic Devices Lab |

**Preamble:** This course is to study the characteristics of various electronic devices and design of various electronic circuits like rectifier, power supply, etc.

**Expected level of output** : Practical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in Electronic circuits

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation    |
|----------------|--|------------------------|------------|------------------------|
| CO1            | Understand the working and operational characteristics of Semiconductor devices. | Understanding          | Conceptual | Simulation Exercises   |
| CO2            | Verify practically the response of various special purpose electronic devices.   | Applying               | Technical  | Technical Presentation |
| CO3            | Design and evaluate the rectifiers, power supply and filters.                    | Evaluating             | Technical  | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

**Course Inputs:**

**Any 9 Experiments**

| Exp. | Name of the Experiment                      |
|------|---|
| 1    | Transistor Characteristics in CE Mode       |
| 2    | JFET Characteristics                        |
| 3    | SCR Characteristics                         |
| 4    | SCR Turn Off using LC Circuit               |
| 5    | AC Voltage Controller using TRIAC and DIAC  |
| 6    | UJT Characteristics                         |
| 7    | UJT as Relaxation Oscillator                |
| 8    | Half Wave Rectifier                         |
| 9    | Full Wave Rectifier (Center-tap)            |
| 10   | Bridge Rectifier                            |
| 11   | DC Regulated Power Supply using Zener Diode |
| 12   | DC Regulated Power Supply using ICs         |
|      | Repeat/Revision                             |
|      | 6   |
|      | <b>Total Hours</b>                          |
|      | <b>33</b>                                   |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical Classes to be arranged in Electronic Circuits Lab

**Essential Equipments:** Power Supply, Function Generator, CRO and Multi-meter.

| Programme  | Course Code | Title                   |
|------------|-------------|-------------------------|
| B.Sc (ECS) | 19ECU06     | Electronic Circuits Lab |

**Preamble:** This course is designed to provide an experience in design, construct, analysis and test the basic electronic circuits.

**Expected level of output** : Practical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in Electronic circuits

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description                                      | Bloom's Taxonomy Level | Skill     | Capstone Evaluation    |
|----------------|--|------------------------|-----------|------------------------|
| CO1            | Learn about biasing of BJTs.                     | Understanding          | Technical | Simulation Exercises   |
| CO2            | Understand the frequency response of amplifiers. | Understanding          | Technical | Technical Presentation |
| CO3            | Design and evaluate the oscillators.             | Applying               | Technical | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

|------------|-------------|---------------------------|
| B.Sc (ECS) | 19ECU07     | Communication Electronics |

**Preamble:** This course covers fundamental concepts of communication systems, which are essential for the understanding of advanced communication systems.

**Expected level of output** : Conceptual Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in electronic circuits and basic mathematics

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|--|------------------------|------------|-----------------------------|
| CO1            | Learn the basic concepts of electromagnetic wave radiation and propagations.                 | Remembering            | Conceptual | Group Assignment            |
| CO2            | Understand important and fundamental antenna engineering parameters and terminology.         | Understanding          | Conceptual | Writing skills              |
| CO3            | Understand AM, FM and PM communication systems.  | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO4            | Apply the essential facts about single sideband modulation for radio communications systems. | Applying               | Technical  | Technical Presentation      |
| CO5            | Design and analyze performance of the Super Heterodyne receiver.                             | Analyzing              | Analytical | Technical Presentation      |

**Modular Assessment Code** : C (Theory-Concepts)

**Course Inputs:**

| Unit | Description  | Text Book | Chapter | Instructional Hours | COs |
|------|--|-----------|---------|---------------------|-----|
| I    | <b>Radiation and Propagation of Waves</b>  |           |         |                     |     |
|      | Fundamentals of EM Waves; Reflection; Refraction; Interference of EM waves   | A         | 10      | 2                   |     |
|      | Ground wave propagation; Sky wave propagation; Space wave propagation  | A         | 10      | 3                   | CO1 |
|      | Virtual height; Critical frequency; MUF; Skip distance   | A         | 10      | 3                   |     |
|      | Duct propagation; Tropospheric scatter propagation   | A         | 10      | 2                   |     |
| II   | <b>Antennas</b>  | A         | 9       | 1                   |     |
|      | Electromagnetic radiations; Elementary doublet   |           |         |                     |     |
|      | Current and voltage distributions; Resonant antennas, Radiation patterns and length calculations                     | A         | 9       | 2                   |     |
|      | Non-resonant antennas; Antenna gain and Effective radiative power; Antenna resistance                                | A         | 9       | 2                   | CO2 |
|      | Bandwidth, Beam width and Polarization; Grounded and ungrounded antennas   | A         | 9       | 1                   |     |
|      | Effect of Antenna height; Selection of Feed point; Antenna Couplers; Impedance matching with stubs and other devices | A         | 9       | 2                   |     |
|      | Dipole arrays; Yagi-Uda antenna; Parabolic antenna ; Horn and Loop antenna; Helical antenna                          | A         | 9       | 2                   |     |

|                    |   |   |   |           |     |
|--------------------|---|---|---|-----------|-----|
| III                | <b>Modulation Techniques</b>  |   |   |           |     |
|                    | Introduction to communication systems; Elements of communication systems; Need for modulation   | A | 1 | 2         |     |
|                    | Electromagnetic spectrum and typical applications; Terminologies in communication systems; Basics of signal representation and analysis | A | 1 | 3         |     |
|                    | <b>Amplitude modulation (AM)</b>  |   |   |           | CO3 |
|                    | AM Techniques; Frequency spectrum of AM wave; Time domain Representation of AM wave; Power Relations in the AM wave                     | A | 3 | 3         | CO4 |
|                    | <b>Sideband Modulation Technique</b>  |   |   |           |     |
|                    | Generation of DSBC signal: Balanced Modulator   | A | 3 | 1         |     |
|                    | Generation of SSB signal: Filter method, Phase shift method; Third method   | A | 3 | 3         |     |
|                    | Vestigial Sideband Modulation Technique   | A | 3 | 1         |     |
|                    | <b>Angle Modulation Techniques</b>  |   |   |           |     |
| IV                 | Frequency modulation; Phase modulation; Comparison of frequency and phase modulation  | A | 4 | 2         |     |
|                    | <b>Frequency Modulation (FM)</b>  |   |   |           | CO3 |
|                    | Mathematical representation; Frequency spectrum of the FM wave; Pre-emphasis and De-emphasis  | A | 4 | 3         |     |
|                    | Generation of FM: Direct and Indirect methods   | A | 4 | 2         |     |
|                    | Comparison of FM and AM   | A | 4 | 1         |     |
| V                  | <b>Receiver</b>   |   |   |           |     |
|                    | Super Heterodyne Receiver   | A | 7 | 2         |     |
|                    | RF section and its characteristics; Sensitivity; Selectivity; Image frequency and its rejection; Adjacent channel selectivity           | A | 6 | 3         | CO5 |
|                    | Spurious response; Tracking   | B | 6 | 2         |     |
|                    | AGC; Double conversion receiver   | B | 6 | 2         |     |
|                    | Revision  |   |   | 5         |     |
| <b>Total Hours</b> |   |   |   | <b>55</b> |     |

| Programme  | Course Code | Title                          |
|------------|-------------|--------------------------------|
| B.Sc (ECS) | 19ECU10     | Linear Integrated Circuits Lab |

**Preamble:** This course provides the basic knowledge in the selection of integrated circuits, study of its specifications and functionality, and design of practical applications.

**Expected level of output** : Practical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge of Electronic Devices and Circuits Analysis

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation    |
|----------------|--|------------------------|------------|------------------------|
| CO1            | Demonstrate an understanding of fundamentals of integrated circuits.                                       | Understanding          | Conceptual | Simulation Exercises   |
| CO2            | Design an application with the use of integrated circuits.   | Applying               | Technical  | Technical Presentation |
| CO3            | Learn how to apply troubleshooting and problem solving skills to resolve linear integrated circuit issues. | Evaluating             | Technical  | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

**Course Inputs:**

**Any 9 Experiments**

| Exp.        | Name of the Experiment   |    |
|-------------|--|----|
| 1           | Inverting and Non-inverting Amplifier using Op-Amp               |    |
| 2           | Adder and Subtractor using Op-Amp                                |    |
| 3           | Integrator and Differentiator using Op-Amp                       |    |
| 4           | Comparator using Op-amp  |    |
| 5           | Active Low Pass and High Pass Filters using Op-Amp               |    |
| 6           | Monostable and Astable Multivibrators using IC 555               |    |
| 7           | Schmitt Trigger using Op-Amp                                     |    |
| 8           | Frequency Multiplier using PLL                                   |    |
| 9           | Current to Voltage and Voltage to Current Converter using Op-Amp |    |
| 10          | Peak Detector using Op-Amp                                       |    |
| 11          | Instrumentation Amplifier using Op-Amp                           |    |
| 12          | Precision Rectifiers using Op-Amp                                |    |
|             | Repeat/Revision  | 6  |
| Total Hours |  | 33 |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical Classes to be arranged in Electronic Circuits Lab

**Essential Equipments:** Power Supply, Function Generator, CRO and Multi-meter.

| Programme  | Course Code | Title                            |
|------------|-------------|----------------------------------|
| B.Sc (ECS) | 19ECU11     | Digital Electronics and VHDL Lab |

**Preamble:** This course focuses to design and construct the basic digital electronic circuits and to become familiar with the VHDL programming.

**Expected level of output** : Practical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Basic knowledge in electronic circuits

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation    |
|----------------|---|------------------------|------------|------------------------|
| CO1            | Acquire the fundamental knowledge in basic logic gates. | Understanding          | Conceptual | Simulation Exercises   |
| CO2            | Design and analyze digital electronic circuits.         | Applying               | Technical  | Technical Presentation |
| CO3            | Develop the VHDL programming for the digital circuits.  | Applying               | Technical  | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

**Course Inputs:**

**Any 9 Experiments**

| Exp. | Name of the Experiment                             |
|------|--|
| 1    | Verification of Logic Gates                        |
| 2    | Half Adder and Full Adder                          |
| 3    | Half-Subtractor and Full-Subtractor                |
| 4    | 4-bit Binary to Gray and Gray to Binary Conversion |
| 5    | 4x2 Encoder and 2x4 Decoder                        |
| 6    | 4:1 Multiplexer and 1:4 De-multiplexer             |
| 7    | Verification of JK Flip-Flop                       |
| 8    | Shift Registers and Ring Counter                   |
| 9    | Logic Gates using VHDL                             |
| 10   | Half Adder and Full Adder using VHDL               |
| 11   | Decoder and Encoder using VHDL                     |
| 12   | Multiplexer and De-multiplexer using VHDL          |
|      | Repeat/Revision                                    |
|      | 6  |
|      | <b>Total Hours</b>                                 |
|      | <b>33</b>  |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical classes to be arranged in Electronic Circuits Lab and DSP Lab.

**Essential Equipments:** Power Supply, Function Generator and Multi-meter

| Programme  | Course Code | Title   |
|------------|-------------|---|
| B.Sc (ECS) | 19ECU12     | Microwave and Fiber Optic Communication Systems |

**Preamble:** The course aims to provide students with a broad understanding of microwaves and microwave active devices. It will also explain the RADAR and fiber optic communication systems.

**Expected level of output** : Conceptual Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in basic electronic systems

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|---|------------------------|------------|-----------------------------|
| CO1            | Understand the theory of microwave and fiber optic communication.     | Understanding          | Conceptual | Writing skills              |
| CO2            | Discuss the working of microwave amplifiers, oscillators and devices. | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO3            | Design and analyze the microwave amplifiers, oscillator and devices.  | Analyzing              | Analytical | Technical Presentation      |
| CO4            | Understand the basics of Radar technology.                            | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO5            | Describe the different characteristics of optical fiber.              | Understanding          | Conceptual | Group Assignment            |

**Modular Assessment Code** : C (Theory-Concepts)

**Course Inputs:**

| Unit | Description   | Text Book | Chapter | Instructional Hours | COs        |
|------|---|-----------|---------|---------------------|------------|

| Programme  | Course Code | Title                         |
|------------|-------------|-------------------------------|
| B.Sc (ECS) | 19ECU14     | Communication Electronics Lab |

**Preamble:** This course aims to experimentally study the concepts of communication electronics by designing the circuits and to become familiar with various output wave forms.

**Expected level of output** : Practical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Basic knowledge in electronic principles

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation    |
|----------------|---|------------------------|------------|------------------------|
| CO1            | Verify the characteristics of various electronic communication circuits practically.                  | Applying               | Technical  | Technical Presentation |
| CO2            | Understand the need and the basics of antenna.  | Analyzing              | Analytical | Simulation Exercises   |
| CO3            | Apply the knowledge on design techniques and study the performance behavior of communication systems. | Applying               | Technical  | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

**Course Inputs:**

**Any 9 Experiments**

| Exp. | Name of the Experiment                                  |
|------|---|
| 1    | Amplitude Modulation and Demodulation                   |
| 2    | Frequency Modulation                                    |
| 3    | Frequency Demodulation                                  |
| 4    | DSB-SC modulation and demodulation                      |
| 5    | SSB-SC modulation and Demodulation (Phase Shift method) |
| 6    | VCO using IC 555  |
| 7    | RF Amplifier  |
| 8    | IF Tuned Amplifier                                      |
| 9    | Characteristics of Mixer Circuit                        |
| 10   | Pre-emphasis and De-emphasis Circuits                   |
| 11   | Balanced modulator                                      |
| 12   | Study of Super Heterodyne Receiver                      |
|      | Repeat/Revision   |
|      | 6   |
|      | <b>Total Hours</b>                                      |
|      | <b>33</b>   |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical Classes to be arranged in Electronic Communication Lab

**Essential Equipments:** Power Supply, Communication trainers and Multi-meter.

| Programme  | Course Code | Title                                     |
|------------|-------------|---|
| B.Sc (ECS) | 19ECU15     | 8051 Microcontroller and Applications Lab |

**Preamble:** This course introduces students to the 8051 MCU assembly language and embedded C programming. It gives a practical training of interfacing the peripheral devices with the 8051 microcontroller.

**Expected level of output** : Practical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in Logic Circuit Design

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation        |
|----------------|--|------------------------|------------|----------------------------|
| CO1            | Understand the 8051 microcontroller and its programming with assembly and C. | Understanding          | Technical  | Poster Presentation /Chart |
| CO2            | Enrich their knowledge with hands on experiments and project based learning. | Applying               | Technical  | Poster Presentation /Chart |
| CO3            | Troubleshoot interactions between software and hardware.                     | Analyzing              | Analytical | SSA                        |

**Modular Assessment Code** : M (Practical - Applications)

**Course Inputs:**

Any 9 Experiments

| Exp. | Name of the Experiment                       |
|------|--|
| 1    | Arithmetic Operations                        |
| 2    | Logical Operations                           |
| 3    | Sum of N numbers                             |
| 4    | Square Wave Generation                       |
| 5    | KEY and LED Interface                        |
| 6    | Solid-State Relay Interface                  |
| 7    | DC Motor Control                             |
| 8    | LCD Interface                                |
| 9    | Object Counter using Interrupt               |
| 10   | Stepper Motor Interface                      |
| 11   | Serial Port Interface using RS232            |
| 12   | Distance Measurement using Ultrasonic Sensor |
|      | Repeat/Revision                              |
|      | 6  |
|      | <b>Total Hours</b>                           |

| Programme  | Course code | Title              |
|------------|-------------|--------------------|
| B.Sc (ECS) | 19ECU17B    | Internet of Things |

**Preamble:** The course introduces the concepts of Internet of Things to build IoT applications.

**Expected level of output** : Conceptual and Application Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in computer networks and microcontrollers

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|--|------------------------|------------|-----------------------------|
| CO1            | Understand the concepts of Internet of Things.                       | Understanding          | Conceptual | Writing Skills              |
| CO2            | Understand the basic design principles for IoT.                      | Understanding          | Conceptual | Group Assignment            |
| CO3            | Understand how enterprises plan for IoT deployment in networks.      | Understanding          | Conceptual | Group Assignment            |
| CO4            | Acquire skills on IoT Systems like Python Packages and Raspberry pi. | Understanding          | Conceptual | Technical Presentation      |
| CO5            | Implement basic IoT applications on embedded platform.               | Applying               | Technical  | Poster Presentation/ Charts |

**Modular Assessment Code** : C (Theory-Concepts)

**Course Inputs:**

| Unit | Description  | Text Book | Chapter | Instructional Hours | COs |
|------|--|-----------|---------|---------------------|-----|
| I    | <b>Introduction to Internet of Things</b>  |           |         |                     |     |
|      | Definition and Characteristics of IoT; Physical Design of IoT  | A         | 1       | 2                   |     |
|      | Logical Design of IoT; IoT Enabling Technologies   | A         | 1       | 3                   | CO1 |

| Programme  | Course Code | Title                            |
|------------|-------------|----------------------------------|
| B.Sc (ECS) | 19ECU19     | Robotics and Arduino Programming |

**Preamble:** This course focuses on the topics in robotics that relate to fundamentals, actuators, grippers, and sensors of robot systems. This course will also explain how to use Arduino to operate lights, motors, and sensors for making a robot.

**Expected level of output** : Conceptual and Application Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in instrumentation and microcontrollers

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|---|------------------------|------------|-----------------------------|
| CO1            | Understand the basic concepts of robots.                | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO2            | Identify the drives and end effectors of robot systems. | Understanding          | Conceptual | Class Presentation          |
| CO3            | Familiarize with the most common robot sensors.         | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO4            | Explore the open source development platform (Arduino). | Applying               | Technical  | Simulation Exercises        |
| CO5            | Develop simple robot control systems using Arduino.     | Applying               | Technical  | SSA                         |

| Programme  | Course Code | Title             |
|------------|-------------|-------------------|
| B.Sc (ECS) | 19ECU25     | Computer Networks |

**Preamble:** This course is to provide students with an overview of the concepts and fundamentals of data communication, various types of computer networks and their protocols.

**Expected level of output** : Conceptual and analytical Level

**Department offered** : Electronics and Communication Systems

**Prerequisites** : Knowledge in Computer Systems

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|---|------------------------|------------|-----------------------------|
| CO1            | Understand the fundamental concepts of computer networking.   | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO2            | Enumerate the layers of the OSI model and TCP/IP, and explain the functions of each layer.                              | Understanding          | Conceptual | SSA                         |
| CO3            | Identify the different types of network topologies and protocols.   | Understanding          | Conceptual | Class Presentation          |
| CO4            | Identify the different types of network devices and their functions within a network.                                   | Understanding          | Conceptual | Class Presentation          |
| CO5            | Expertise in basic protocols of computer networks such as the design, implement and maintenance of individual networks. | Applying               | Technical  | Simulation Exercises        |

**Modular Assessment Code** : H (Theory-Technology)

**Course Inputs:**

| Unit | Description   | Text Book | Chapter | Instructional Hours | COs        |

**Course Inputs:**

Any 9 Experiments

| Exp.               | Name of the Experiment                          |
|--------------------|---|
| 1                  | Burglar Alarm                                   |
| 2                  | Power Inverter                                  |
| 3                  | Automatic Street Light Controller               |
| 4                  | Emergency Lamp                                  |
| 5                  | Thyristor Chopper                               |
| 6                  | Triggering of SCR by R, C and DIAC              |
| 7                  | Commutation Techniques (self and complementary) |
| 8                  | Speed Control of DC Motor using SCR and UJT     |
| 9                  | TRIAC Flasher                                   |
| 10                 | Fan Regulator using TRIAC                       |
| 11                 | Design of Snubber Circuit                       |
| 12                 | Full Wave Rectifier using SCR                   |
|                    | Repeat/Revision                                 |
|                    | 6   |
| <b>Total Hours</b> |   |
| <b>33</b>          |   |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical Classes to be arranged in Electronic Circuit Lab.

**Essential Equipments:** Power Supply, Function Generator, CRO and Multi-meter.

| Programme  | Course Code | Title                            |
|------------|-------------|----------------------------------|
| B.Sc (ECS) | 19ECU28     | Modern Communication Systems Lab |

**Preamble:** This course is to improve the students' ability in understanding the concepts of digital modulation and demodulation techniques.

**Expected level of output** : Practical Level  
**Department offered** : Electronics and Communication Systems  
**Prerequisites** : Knowledge in digital communication techniques

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation    |
|----------------|---|------------------------|------------|------------------------|
| CO1            | Know the working of digital communication systems.  | Understanding          | Conceptual | Simulation Exercises   |
| CO2            | Identify and analyze the major components used in digital communication systems.                      | Analyzing              | Analytical | Technical Presentation |
| CO3            | Design and demonstrate the electronic circuits, to carry out modulation and demodulation experiments. | Applying               | Technical  | Technical Presentation |

**Modular Assessment Code** : L (Practical - Experiments)

**Course Inputs:**

**Any 9 Experiments**

| Exp. | Name of the Experiment             |
|------|------------------------------------|
| 1    | Signal Sampling and Reconstruction |
| 2    | Modulation and Demodulation of PAM |
| 3    | Modulation and Demodulation of PWM |
| 4    | Modulation and Demodulation of PPM |
| 5    | Amplitude Shift Keying             |
| 6    | Frequency Shift Keying             |
| 7    | Binary Phase Shift Keying          |
| 8    | Differential Phase Shift Keying    |
| 9    | Time Division Multiplexing         |
| 10   | Frequency Division Multiplexing    |
| 11   | Study of PCM                       |
| 12   | Study of QPSK                      |
|      | Repeat/Revision                    |
|      | 6                                  |
|      | <b>Total Sessions</b>              |
|      | <b>33</b>                          |

**CIA:** 20 Marks; **End Semester:** 30 Marks

**Note:** Practical Classes to be arranged in Electronic Communication Lab

**Essential Equipments:** Power Supply, Function Generator, DSO, Communication trainers and Multi-meter.

| Programme  | Course Code | Title                          |
|------------|-------------|--------------------------------|
| B.Sc (ECS) | 19ECU30A    | Mobile Application Development |

**Preamble:** This course will introduce students to develop and enhance programming skills by focusing upon issues, techniques and applications for mobile platform.

|                                 |   |  |
|---------------------------------|---|--|
| <b>Expected level of output</b> | : | Conceptual and Application Level         |
| <b>Department offered</b>       | : | Electronics and Communication Systems    |
| <b>Prerequisites</b>            | : | Knowledge in basic programming languages |

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description  | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|--|------------------------|------------|-----------------------------|
| CO1            | Describe the basic components of an Android application.                                     | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO2            | Define the lifecycle methods of Android application components.                              | Understanding          | Conceptual | Class Presentation          |
| CO3            | Describe the basics of event handling in Android.  | Understanding          | Conceptual | SSA                         |
| CO4            | Understand the interaction between user interface and underlying application infrastructure. | Understanding          | Conceptual | Simulation Exercises        |
| CO5            | Implement Android applications using an Android Software Development Kit (SDK).              | Applying               | Technical  | Simulation Exercises        |

|------------|-------------|---------------------------------|
| B.Sc (ECS) | 19ECU30B    | PC Hardware and Troubleshooting |

**Preamble:** This course is useful as it equips students with basic knowledge about personal computers. The students will also learn about PC hardware and software, maintenance and troubleshooting of PC systems.

**Expected level of output :** Conceptual and Application Level

**Department offered :** Electronics and Communication Systems

**Prerequisites :** Basic knowledge in computer fundamentals

**Course Outcomes:**

After successful completion of this course, the students will be able to

| Course Outcome | Description   | Bloom's Taxonomy Level | Skill      | Capstone Evaluation         |
|----------------|---|------------------------|------------|-----------------------------|
| CO1            | Describe the different hardware components inside and connected to a computer.                          | Understanding          | Conceptual | Poster Presentation/ Charts |
| CO2            | Understand the requirement of both hardware and software to work for a PC.                              | Understanding          | Conceptual | Class Presentation          |
| CO3            | Learn how display adapters and serial interface works.  | Understanding          | Conceptual | SSA                         |
| CO4            | Install/connect associated peripherals.   | Applying               | Technical  | Poster Presentation/ Charts |
| CO5            | Diagnose and troubleshoot microcomputer systems hardware and software, and other Peripheral equipments. | Analyzing              | Analytical | Group-mini Project          |

**Modular Assessment Code : D (Theory-Applications)**
